IC3 GS5:

Computing Fundamentals

Lesson 2 Projects

Presented By

LearnKey

Fill-in-the-Blanks

Instructions: While watching Lesson 2, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

Hardware Part I

1. A _____ is a computer or program that is responsible for accepting requests from various network sources. [Device Basics]
2. _____ memory can only store information when a computer is on, while _____ memory will retain information even if there is no power. [Memory and Storage]
3. External speakers are often connected using USB or _____ inch audio jacks. [Connecting Speakers]
4. The most common form of wired network connection is done using an _____ connection. [Wired Connection]

LearnKey

Define Basic Terms

Description:

When developing fundamentals in computing we need to have a strong understanding of terms dealing with computing.

For this project, you will define the listed terms.

Steps for Completion:

1. Define the terms below:

a. Server:

c. Desktop:

b. Laptop:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Hardware: Device Basics

Project File: N/A

Difficulty: Beginner/Intermediate

Required Materials: N/A

Objectives:

1.0 Computing Fundamentals
1.2 Hardware
1.2.a Types of devices
1.2.a.i Server
1.2.a.ii Laptop
1.2.a.iii Desktop

Understanding RAM

Description:

A key element when working with computers is how much memory a computer has and how that can affect your usage and how fast programs run on your computer. For this project, you will use the following document to find out how much RAM your computer has. Then explain what RAM is and how a computer might react when the RAM is full.

Steps for Completion:

1. Find RAM on a specific computer, then answer the questions below.

   a. Define RAM.

   b. Explain how a computer will react when there is not enough RAM.

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training;
Hardware: Device Basics

Project File: N/A

Difficulty: Beginner

Required Materials: N/A

Objectives:
1.0 Computing Fundamentals
1.2 Hardware
1.2.b Know the impact of memory and storage on usage

Label Ports

Description:

Computers have several different ports which are used to connect different peripherals to the computer or to access the Internet. This project will help you develop knowledge of a variety of ports which can be used to connect to the Internet, connect monitors, or connect audio.

For this project you will label the different ports and then write a brief sentence explaining the purpose of each port.

Steps for Completion:

1. Label each port below and write a brief sentence about each port describing its purpose:

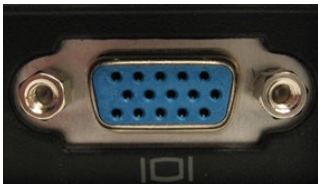

a. 

b. 

c. 

d. 

e. 

f. 

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:

Hardware: Connecting Digital Cameras; Connecting Speakers; Connecting Webcams; Connecting Printers; Connecting Generic USB Device; Connecting External Displays

Project File: N/A

Difficulty: Beginner/Immediate

Required Materials: N/A

Objectives:

1.0 Computing Fundamentals
1.2 Hardware
1.2.c Know how to connect different peripherals
1.2.c.i Camera
1.2.c.ii Audio
1.2.c.iii Microphone
1.2.c.iv Printer
1.2.c.v USB devices
1.2.c.vi External display

LearnKey

Label Peripherals

Description:

A computer is designed to attach different peripherals which are used to manipulate the computer or to download information to the computer.

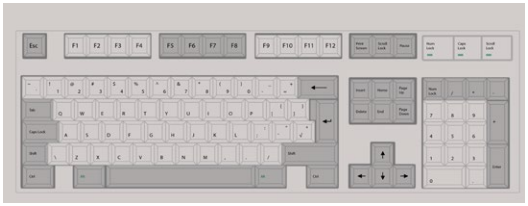

For this project, you will demonstrate your knowledge of peripheral objects. Label each object and explain how each object is used in relation with the computer.

Steps for Completion:

1. Label each port below and write a brief sentence about each port describing its purpose:

a. 

b. 

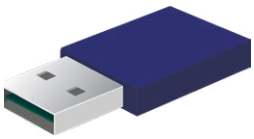

c. 

d. 

e. 

f. 

g. 

h.
