IC3 GS5:

Computing Fundamentals

Lesson 3 Projects

Presented By

LearnKey

Fill-in-the-Blanks

Instructions: While watching Lesson 3, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

Hardware Part II

1. A computer device may be limited if it can only connect to the Internet _____. [Platform Compatibility]
2. A _____ is a piece of software which adds additional functionality to an application. [Media Compatibility]
3. A modem is a device which translates _____ signals into _____ information. [Modems]
4. Bandwidth defines how fast data can transfer to a device and is purchased through an _____. [Bandwidth]
5. A router is a device used to transfer data _____ from one computer network to another. [Routers]
6. A touchscreen requires less _____ but is less accurate than a non-touchscreen. [Touchscreens vs. Non-Touchscreens]

Power Management

Description:

When working with computers it is important to understand how to manage the power usage. By understanding power usage you can save money and it will also help keep your computer working longer.

For this project, you will need to write a paragraph explaining what power management is and which setting you can use to manage the power.

Steps for Completion:

1. Write a paragraph about power management in the field below:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Hardware: Power Management

Project File: N/A

Difficulty: Beginner

Required Materials: N/A

Objectives:
1.0 Computer Fundamentals
1.2 Hardware
1.2.f Understand power management and power settings

Wired Network

Description:

There are several main ways for you to connect to the Internet. It is important to understand the different methods of connectivity, what the differences are, and when each method is used.

Here in this project, you will write a brief description on the difference between cellular, Wi-Fi, and wired networks.

Steps for Completion:

1. Describe the difference between cellular, Wi-Fi, and wired networks.

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Internet Basics: Cellular, Wi-Fi, and Wired Networks

Project File: N/A

Difficulty: Beginner /Intermediate

Required Materials: N/A

Objectives:
1.0 Computer Fundamentals
1.2 Hardware
1.2.j Know the difference between cellular, Wi-Fi, and wired networks

Define Computing Fundamentals Terms

Description:

When developing a foundation in computing we need to have a strong understanding of terms dealing with computing.

For this project, you will define the listed terms.

Steps for Completion:

1. Define the terms below:

a. Modem:

b. Bandwidth:

c. Router:

d. Ethernet:

e. IP Addresses:

f. Android:

g. Firmware:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Internet Basics: Modems; Bandwidth; Routers; IP Address

Project File: N/A

Difficulty: Beginner/Intermediate

Required Materials: N/A

Objectives:

1.0 Computer Fundamentals
1.2 Hardware
1.2.h Know platform implications and considerations
1.2.h.i For example Mac, PC, Linux, iOS, Android, Firmware
1.2.k Understand concepts regarding connecting to the internet
1.2.k.i Modem
1.2.k.ii Bandwidth, speed
1.2.k.iii Have a basic understanding of what a router is
1.2.k.iv Wired
1.2.k.v Wireless

Working with Hardware Configuration

Description:

Technology continues to change and improve when it comes to computers. New features make creating things on a computer easier but sometimes there are some issues.

For this project, you will need to describe the pros and cons of touchscreen, non-touchscreen, and hybrid devices.

Steps for Completion:

1. Use the page below to explain the pros and cons of touchscreen, non-touchscreen, and hybrid devices:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Hardware: Touchscreen vs. Non-Touchscreens

Project File: N/A

Difficulty: Beginner /Intermediate

Required Materials: N/A

Objectives:
1.0 Computing Fundamentals
1.2 Hardware
1.2.n Understand the pros and cons of touchscreen vs non-touchscreen devices
