Instructions: While watching Lesson 4, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

Computer Software Architecture Part I

1. An operating system is the software on a computer device that manages all of its installed _____ and hardware. [Operating Systems]

2. Linux is an _____ operating system which is available to the general public. [Operating Systems]

3. Users can customize their Windows device by going to the Control Panel under _____. [Desktop Customization]

LearnKey

Defining Operating Systems

Description:

There are a few different kinds of operating systems which are used by different computers and have different usabilities. It is important to know what each one is used for and what devices typically use the operating systems.

For this project, you will describe the differences and similarities between the most common operating systems used for Mac, PC, and Linux.

Steps for Completion:

1. Describe the differences and similarities between the most common operating systems used for Mac, PC, and Linux in the space provided below:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Software Architecture: Operating Systems

Project File: N/A

Difficulty: Beginner/Intermediate

Required Materials: Computer, mobile device, or tablet with Internet access

Objectives:
1.0 Computing Fundamentals
1.2 Hardware
1.2.h Know platform implications and considerations
1.2.h.i For example Mac, PC, Linux, iOS, Android, Firmware

Label Page Options

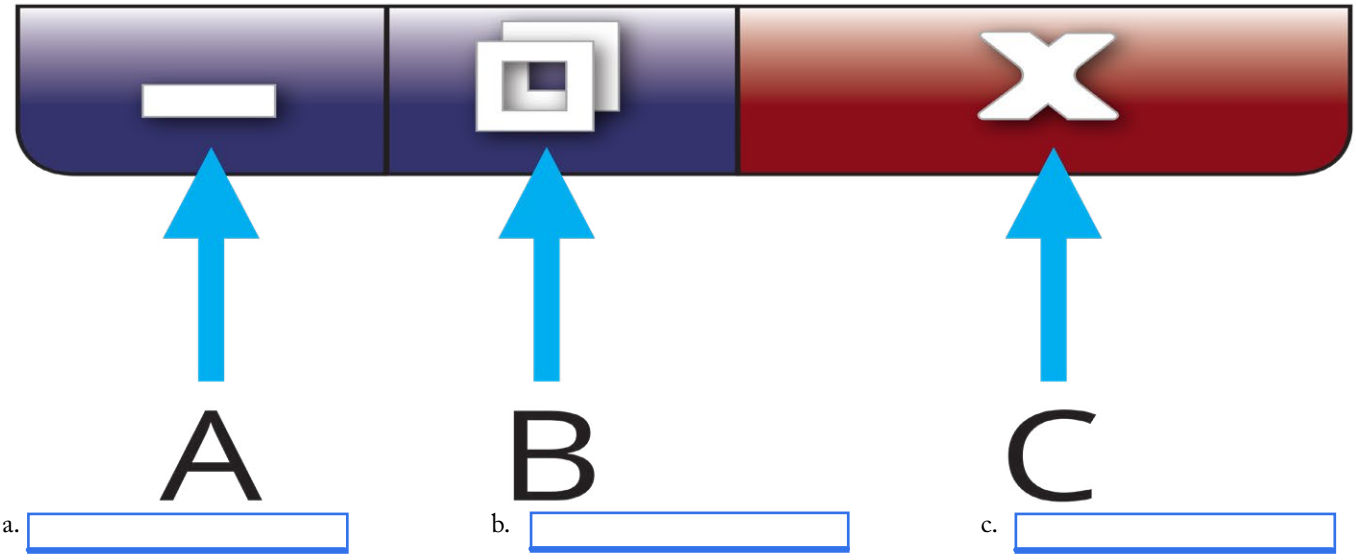

Description:

You will need to know how to navigate and manage your windows that you have open. As you work you may often have multiple windows open simultaneously. This project will help you know of a few buttons that can help you manage your windows.

In this project, label the image on the following page.

Steps for Completion:

1. Label each of the items shown below:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Software Architecture: Window Management

Project File: N/A

Difficulty: Beginner

Required Materials: N/A

Objectives:
1.0 Computing Fundamentals
1.3 Computer Software Architecture
1.3.c Have a general understanding of operating systems and software settings
1.3.c.i Know basic desktop customization

LearnKey

Labeling Menu Navigation

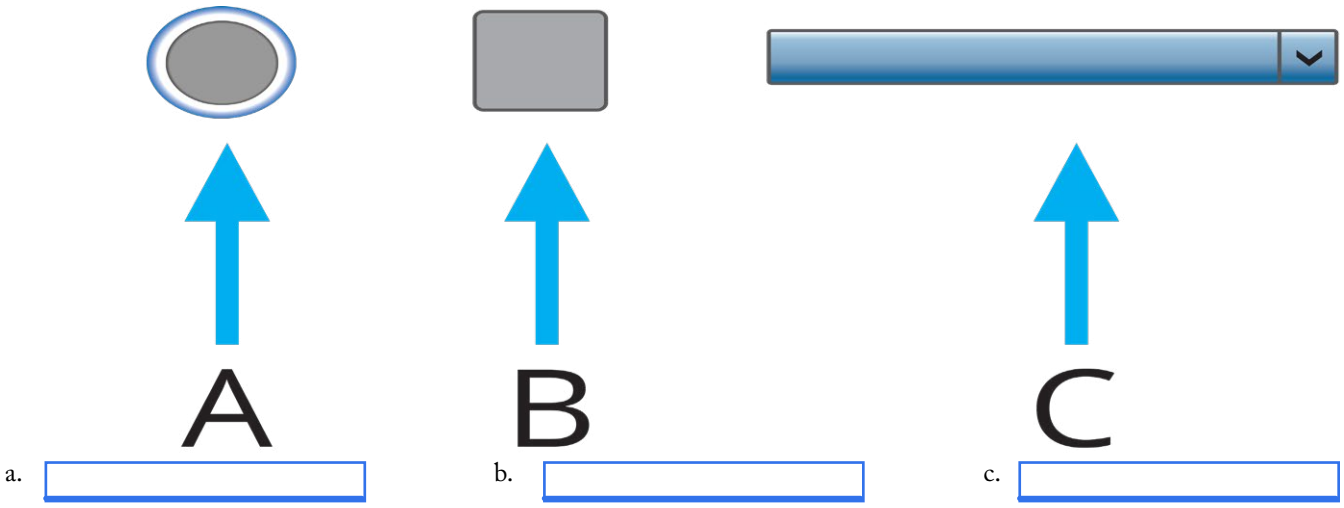

Description:

As you are working with software on your computer you will need to be able to make selections to indicate what you want the software to do. This project will help you know the different selection options.

For this project, you will label the images in the following document.

Steps for Completion:

1. Label each of the images shown below:

Reference:

LearnKey's IC3 GS5: Computing Fundamentals Training:
Software Architecture: Navigating Menus

Project File: N/A

Difficulty: Beginner

Required Materials: N/A

Objectives:
1.0 Computing Fundamentals
1.3 Computer Software Architecture
1.3.h Menu navigation
1.3.h.i Radio buttons
1.3.h.ii Check boxes
1.3.h.iii Drop-down menus

Desktop Customization

Description:

When setting up a computer you will have the ability customize your desktop. You can add pictures for a background change, the screen resolution to help you better see information or to save on power, and modify screen savers.

For this project, you will change the screensaver and have it come on when the computer has been idle for 10 minutes. Then modify the screen resolution to help someone who is partially blind. Use a personal image and set it as your background.

Steps for Completion:

1. Change screensaver to have it come on when the computer has been idle for 10 minutes.
2. Modify the screen resolution for someone who is partially blind.
3. Download an image to your computer.
4. Make the picture your desktop background.
