Fill-in-the-Blanks

Instructions: While watching Lesson 7, fill in the missing words according to the information presented by the instructor. [References are found in the brackets.]

Backup and Restore

1. A backup is a _____ of the data on your computer, or device, at a specific point in time. [Backup and Restore]
2. For offices with a lot of data, or valuable data, _____ and _____ backups are popular. [Backup and Restore]
3. When backing up a full hard-drive, a drive the same size or _____ than the drive on the computer is required. [Backup and Restore]
4. Managing a backup for an iOS device is done through _____ [Restore Personal Device]
5. On an Android device, you can use the _____ backup service. [Restore Personal Device]

Backing Up and Restoring Data

Description:

Backing up and restoring data is an essential part of troubleshooting. For many offices and home users, offsite and cloud backups are popular. Offsite backups are when the data is backed up in a different physical location than the original data, so that data is safe should a disaster hit at the primary site. Cloud backups offer users the same advantages as offsite backups and are typically less expensive. However you choose to do it, backing up data is always recommended.

For this project, you will back up data to a USB drive or other external hard drive, and then restore the data on your device.

Steps for Completion:

1. Choose a folder, or multiple folders, on your computer to back up to your USB drive.
2. Save that data to your USB drive.
3. (Optionaol) Screenshot that file to show that it has been saved to your USB drive.
4. Restore a file from one of the time frames in your File History.

LearnKey's IC3 GS5: Computing Fundamentals Training:
Backup and Restore: Backup and Restore

Project File: N/A

Difficulty: Intermediate

Required Materials: Computer and a USB drive, or another external drive

Objectives:
1.0 Computing Fundamentals
1.4 Backup and Restore
1.4.a Understand backing up concepts
1.4.b Know how to back up and restore
