Files Sharing and Permissions

Description:

There are some great features that come with different file types. Files can be given permissions which can set documents to Read-only. Files can also be shared so that others can view them or even work in them.

For this project you will set a file's properties to Read-only and then share the same file with specific people. Set one person with Read/Write privileges and leave the others as Read-only.

Steps for Completion:

1. Open the properties of a file and set to Read-only.
2. Share the file with specific people.
3. Set one person with Read/Write privileges.

File and Software Management: File Permissions and Sharing

Project File: N/A

Difficulty: Intermediate/Advanced

Required Materials: Computer

Objectives:
1.0 Computing Fundamentals
1.3 Computer Software Architecture
1.3.f Know file structures and file/folder management
1.3.f.ii File permissions

Files Scanned and Sent

Description:

When working with documents there will be occasions when you will have a hard copy and you need to make an electronic copy and send it to someone via email. Oftentimes this document is too big to send regularly and so you will need to zip the file so that it compresses the information so that it is then a manageable size to send via email.

For this project you will scan a 10-page document and save it on your desktop. You will zip that file in a folder. Then email that folder to someone.

Steps for Completion:

1. Scan and save document.
2. Zip document in a folder.
3. Email zipped file to someone.
